- Responsive design
- Accessibility testing
- API integration
- RESTful programming
- Database design
- Data structuring
- Quick learner

TECH STACK

HTML 5

CSS 3

JavaScript

jQuery

Bootstrap

React

AngularJs

Polymer

Firebase

SQL

Git

August 23, 2018

Re: **Parker O'Brien**

To whom it may concern:

I am pleased to provide this recommendation for Parker O'Brien, who worked a summer internship as a software developer for C/D/H in 2018.

Parker was selected from a pool of intern applications received from Grand Valley State University (GVSU) to work at C/D/H, and he quickly became a valued resource and team member. His interpersonal skills allowed him to communicate effectively with his teammates and with clients.

Parker was given a wide-range of development work during his internship (client development projects and internal C/D/H products). He was able to demonstrate his proficiency in client-side development using JavaScript, HTML, and CSS, as well as a variety of pre-processors and frameworks. He was also able to interface with SharePoint, SQL server and additional third-party APIs to surface business-critical data to our clients. His understanding of web development technologies and his ability to learn and adapt quickly made his C/D/H internship a success.

I am confident he will make a valuable addition to any firm he joins.
